Speed of Light

In 1983, the metre was redefined in the International System of Units (SI) as the distance travelled by light in vacuum in 1/299792458 of a second. As a result, the numerical value of c in metres per second is now fixed exactly by the definition of the metre - wiki

***1420.405751786 MHz the vacuum wavelength of 21.10611405413 cm in free space.
the hydrogen 1s ground state that have an energy difference of 5.87433 μeV . -wiki
299.792458 Speed of Light***

The hydrogen line, 21 centimetre line or HI line refers to the electromagnetic radiation spectral line that is created by a change in the energy state of neutral hydrogen atoms. This electromagnetic radiation is at the precise frequency of 1420.405751786 MHz, which is equivalent to the vacuum wavelength of 21.10611405413 cm in free space.

5.87433 μeV . H-Line Spin-Flip Q-Energy Constant

The microwaves of the hydrogen line come from the atomic transition of an electron between the two hyperfine levels of the hydrogen 1s ground state that have an energy difference of 5.87433 μeV . The frequency, ν , of the quanta that are emitted by this transition between two different energy levels is given by the Planck-Einstein relation $E = h\nu$ The constant of proportionality, h , is known as the Planck constant. - wiki

*Hydrogen is the prime and first element of all of creation. The chime represents music of the
spheres at the sub-atomic level. Their total range is ratio 323:180=1.79444944 , or a minor 7th
interval, the basic unit of the visible spectrum of color. - net*

1271.5/.5 = 2543 M9! P-Pi HL Spin-Bit Constant

M9! HIQ-Planck C. 984151/2543 M9! P-Pi HL Spin-Bit C.

984151/2543 = 387.0039323633504

387.0039323633504 = 387.0039323633504

387.0039323633504/.0039323633504 = 98415.100000000

1/0.0039323633504 = 254.300000000000 M9! P-Pi HL Spin-Bit Constant

Hydrogen Line 21 Spin-F Photon C. 587433/221 M9! Constant

587433/221 = 2658.0678733031673

2658.0678733031673/.0678733031673 = 39162.2000000

39162.2/.2 = 195811

195811/11 = 17801

17801/2543 M9! P-Pi HL Spin-Bit Constant

17801/2543 = 7
